1 | Introduction

The goal of this document is to have the most common used elements for the markup language `typst` readily available. A detailed documentation can be found on theirs website: https://typst.app/docs It is to note that these are **my** most common used elements. For some elements custom templates are needed:

- tablex
- myref
- all files in the `00-templates/` folder such as
  - `boxes.typ`
  - `constants.typ`
  - `helpers.typ`
  - `items.typ`
  - `metadata.typ`
  - `template-*`

2 | Installation

2.1 With `cargo`

If you use already the `rust` programming language then you can use rust to install the latest toolchain.

```
# install rust and cargo
curl https://sh.rustup.rs -sSf | sh

# install typst
cargo install --git https://github.com/typst/typst
```

2.2 MacOS

On MacOS you can use `homebrew`

```
# install homebrew
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"

# install typst
brew install typst
```

2.3 Linux

In Linux you can use the commonly available package manager

```
brew install typst
pacman -S typst
xbps-install typst
sudo apt-get install typst
```

2.4 Windows

On Windows you can use `chocolatey`. See: https://chocolatey.org/install

```
# install chocolatey
# ensure to use a administrative powershell
Set-ExecutionPolicy            Bypass            -Scope           Process           -
Force;          [System.Net.ServicePointManager]::SecurityProtocol            =
[System.Net.ServicePointManager]::SecurityProtocol  -bor  3072; iex  ((New-
Object System.Net.WebClient).DownloadString('https://community.chocolatey.org/install.ps1'))

# install typst
choco install typst
```

3 | Formatting

3.1 Markup

Name	Example	Raw
Singleline Comment		`//`
Multiline Comment		`/* */`
Paragraph break		`blankline`
Line break		`\`

Rappel d'examen :

Vous ne pouvez utiliser que les éléments suivants :
- le résumé de deux pages que vous avez créé.
- une calculatrice de poche

Commenter également tout le code de haut niveau et le code assembleur de manière appropriée afin d'expliquer son but et son intégration dans la structure du programme.

Good Luck!

managing complex knowledge work, with an
initial emphasis on software development, al-
though it has been used in other fields and   `#gls-scrumm.description`
is slowly starting to be explored for other
complex work, research and advanced tech-
nologies.

5.5 Acronym

The acronym entries need to be defined in `03-tail/glossary.typ`. For the acronym functions the
"import" of `01-head/helpers.typ` is needed.

```
#import "../01-head/helpers.typ": *
#import "../03-tail/glossary.typ": *
```
